

LEED & Green Building

Alpha Aluminum is proud to support **LEED** and green building to help our environment and the sustainable future. All **Alpha Aluminum** frames are 100% recyclable and ALL waste generated in our manufacturing process is recovered and recycled. Like few other materials, aluminum can be recycled over and over, plus, with its significant scrap value more is diverted from the waste stream.

Alpha Aluminum's raw materials are extruded from billet that is composed of at least 75% recycled aluminum, making it **LEED compliant** as well. Our frames contain at a minimum:

50% Pre-Consumer Material (PCM)
25% Post-Consumer Waste (PCW)

Recycling aluminum takes only 1/20th of the energy required to produce it, reducing greenhouse gas emissions.

Alpha Aluminum frames also qualify for **LEED credit as a regional material** for most projects in California, Nevada and Arizona. Our raw materials are extruded in Ontario, CA and frames are manufactured in Anaheim CA.
